**Comments**

US futures were pretty flat across the board with beans and corn finding a little support from higher crude prices and the weaker dollar but most activity was restricted to short covering prior to tomorrow nights USDA report. Poor weekly US export sales were not much of a surprise for the beans and corn trader but US weekly wheat sales were a little above trade expectations but still quiet low. US winter wheat is in almost perfect condition as it begins to break dormancy, areas that were still a little dry are expected to receive beneficial rain this week and should set the crop off to an ideal spring start. Further north snow melt will provide ample moisture for the US spring wheat but many believe will also lead to extensive flooding of low lying fields. On the local front we see mung beans enjoying what the trade has termed a short term spike as traders washout contracts effected by the big wet in western Queensland. Mung beans prices jumped late last week as crop losses were being calculated across the western Downs, this improvement in price opens a window of opportunity for those still looking for forward contracts for mung beans. Sorghum values are being set by the softer sellers at present and now represents good buying when stacked up against wheat. Wheat executed out of the system is around a \$190 to \$195 ex farm equivalent off the LPP while sorghum bids are around \$170 to \$175. New crop chickpeas slipped a little on the stronger Aussie dollar. bid \$390 Narrabri.

Weather	Currency
A large high (1040) off South Australia will dominate the weather for the next few days. Dry weather is welcome across much of the eastern wheat belt and should allow field work to pick up over the next seven days. Rain looks likely to be isolated to the coastal fringe for the week ahead with both the seven and ten day models showing little chance of rain over the NSW wheat belt. Daily temperatures are expected to make the high twenties with night time temps in the mid teens, perfect weather.	0.9089 CBOT Wheat Move & AUD / T \$0.95

The move reflects both the variation in nearby CBOT wheat futures in overnight trade and any change that may have occurred in the exchange rate between the USD & the AUD. Sometimes a move higher or lower in CBOT wheat futures maybe countered by a move in the exchange rate, this will reflect such a move.
